ER Diagram:

Columns with ** will be finalized at a later date

Tables:

1. **USERS** - This table holds user account information.
 - a. **user_id** - The *primary key* for the table; it is a guaranteed unique identifier for every user that signs up and receives an account on the site.
 - Data type: *varchar(40)* or supported *uuid* data type
 - b. **user_account**** - The user's email or other identifier that they used during the signup process.
 - Data type: *varchar(255)*
 - c. **account_type** - Whether the user signed up with Marist, Facebook, or Google account credentials.
 - Data type: *varchar(40)*
 - d. **admin_flag** - Flag that determines if the user has administrative privileges.
 - Data type: *char(1)* (e.g. t,f) or supported *bool* data type
 - e. **last_login** - Records the user's last login date and time.
 - Data type: *datetime*
 - f. **date_added** - The date and time the user is added to the system.
 - Data type: *datetime*
 - g. **date_last_updated** - The date and time the user's account information is last updated.
 - Data type: *datetime*

2. **USER_SOURCE_FILES** - This table holds information relating to the code source files uploaded by the user.

- a. **user_source_file_id** - The *primary key* for the table; it is unique for every source file uploaded.
 - Data type: *varchar(40)* or supported *uuid* data type
- b. **user_id** - A *foreign key*; it relates the user_source_files table to the users_table (e.g. every piece of code uploaded will belong to one and only one user).
 - Data type: *varchar(40)* or supported *uuid* data type
- c. **file_location** - Link to the source file that is stored in a separate location.
 - Data type: *varchar(250)*
- d. **fractal_dimension** - The calculated fractal dimension of the source file.
 - Data type: *double(5)*
- e. **date_added** - The date and time the source file is uploaded.
 - Data type: *datetime*
- f. **date_last_updated** - The date and time the source file information is last updated.
 - Data type: *datetime*

3. **PAINTINGS** - This table holds information about the paintings imported from the Metropolitan Museum of Art's database.

a. **painting_id** - The *primary key* for the table; it is unique for every painting.

➤ Data type: *varchar(40)* or supported *uuid* data type

b. **file_location** - The link to the painting that is stored in a separate location.

➤ Data type: *varchar(250)*

c. **fractal_dimension** - The calculated fractal dimension of the painting.

➤ Data type: *double(5)*

d. **name** - The name of the painting.

➤ Data type: *varchar(150)*

e. **painter** - The name of the painter.

➤ Data type: *varchar(100)*

f. **year_created** - The year that the painting was created.

➤ Data type: *year*

g. **date_added** - The date and time that the painting is added to the database.

➤ Data type: *datetime*

h. **date_last_updated** - The date and time that the painting information is last updated.

➤ Data type: *datetime*

4. **USER_PAINTINGS** - This table holds information on the paintings that are created from the user's source file and selected painting.

a. **user_painting_id** - The *primary key* for the table; it is unique for every painting created by the user's source code.

➤ Data type: *varchar(40)* or supported *uuid* data type

b. **painting_id** - A *foreign key*; it relates the user_paintings table to the paintings table (e.g. every user painting created will have come about from one and only one painting).

➤ Data type: *varchar(40)* or supported *uuid* data type

c. **user_source_file_id** - A *foreign key*; it relates the user_painting table to the user_source_file table (e.g. every user painting will be created from one and only one user source file).

➤ Data type: *varchar(40)* or supported *uuid* data type

d. **user_id** - A *foreign key*; it relates the user_source_files table to the users_table (e.g. every piece of code uploaded will belong to one and only one user).

➤ Data type: *varchar(40)* or supported *uuid* data type

e. **file_location** - The link to the user painting that is stored in a separate location.

➤ Data type: *varchar(250)*

f. **watermark_flag** - Flag that determines whether the painting should be displayed with or without a watermark.

➤ Data type: *char(1)* (e.g. t,f) or supported *bool* data type

g. **date_added** - The date and time that the user painting is added to the database.

➤ Data type: *datetime*

h. **date_last_updated** - The date and time that the user painting is last updated.

➤ Data type: *datetime*

3NF Proof:

- Below are the four tables. Each contains five rows of example data:

USERS:

- Left joining the user_paintings and user_source_files tables to the users table, then left joining the paintings table to the user_paintings table provides a complete table with referential integrity. Each user has one user painting and one user source file which makes use of each of the paintings, so no nulls are present. However, it is possible that a user may not have uploaded a source file or requested a painting which will result in nulls for those columns. Furthermore, not all paintings may be used to make user paintings, so nulls may result from that circumstance. Such nulls are expected and follow our business rules. Due to the length of the resulting table, it is shown below in six segments:

Abc PAINTINGS painting id (PAINT...	Abc PAINTINGS file location (PAIN...	# PAINTINGS fractal dimension ...	Abc PAINTINGS Name	Abc PAINTINGS Painter
